2022 Annual Compliance and Operational Performance Report - Nordion Class 1B Facility

**ADDENDUM TO SECTION 2.7.1.1**

This addendum corrects the NEWs worker extremity doses data in Table 6. The 2022 data previously provided in Table 6 was the measured skin dose from chest dosimeters and not extremity doses from finger TLDs.

Table 6 is revised as follows:

**Table 6  
Minimum, Maximum and Average Worker Extremity Doses (mSv)**

		2018	2019	2020	2021	2022	CNSC Regulatory Limit
NEWs	Average	0.96	1.14	0.93	1.56	1.32	n/a
	Maximum	9.08	20.93	16.48	7.73	4.94	500/yr
	Minimum	0	0	0	0	0	n/a
	Number of NEW monitored	116	130	153	38	42	

The change to the 2022 data in Table 6 is not materially different than what was initially reported and does not impact the analysis of the radiation protection program in section 2.7. Doses at Nordion remain well managed.
